

LXVII (SixS7ven) Litepaper

Version 1.0 – February 2026

1. Introduction

LXVII (SixS7ven) is a community-driven token built on the Solana blockchain. The project aims to evolve from a pure community coin into a structured, governance-based ecosystem with real utility and long-term sustainability.

2. Token Overview

- Blockchain: Solana
- Total Supply: 6,700,000,000 LXVII
- Mint Authority: Disabled
- Freeze Authority: Disabled
- Liquidity Pool: Live
- Governance: Community-based (planned DAO structure)

3. Vision

The long-term objective of LXVII is to build a decentralized ecosystem that prioritizes transparency, sustainability, and community governance. The project focuses on steady liquidity growth, active participation, and structured development phases.

4. Roadmap 2.0 Summary (12 Months)

- Phase 1 – Governance: Implementation of token-based voting. No APY. No financial promises.
- Phase 2 – Community Rewards: Contribution-based rewards for marketing, content, and moderation.
- Phase 3 – NFT Layer: Limited NFT collection providing governance badges and ecosystem access.
- Phase 4 – Launchpad Light: Community-approved ecosystem expansion for selected small projects.

5. Launchpad Light Concept

Launchpad Light is a simplified ecosystem expansion layer. It allows selected small projects to be introduced to the LXVII community after governance approval. It is not a fundraising platform and does not guarantee returns. It provides early access and ecosystem participation opportunities to LXVII holders.

6. Governance & Transparency

Major decisions are intended to be made through community voting. The project commits to transparency in treasury management, roadmap updates, and ecosystem development.

7. Disclaimer

LXVII is a decentralized community token. It does not represent equity, ownership, or guaranteed financial returns. Participation in the ecosystem is voluntary and at individual risk.

LXVII – Community Driven. Transparent. Sustainable.
